THE ENEXTME IS THEN ACTIVATED BY THROMBIN, WHICH CLEAVES A TETRADECAPEPTIDE FROM THE AMINO END OF THE HEAVY CHAIN; THIS REACTION, WHICH CLEAVES AT THE SURFACE OF ENDOTHELIAL CELLS, IS STRONGLY PROMOTED BY THROMBOMODULIN.

-1- TISSUE SPECIFICITY: PLASMA; SYNTHESIZED IN THE LIVER.

-1- FINH: THE VITAMIN K-DEPENDENT; ENXTMATIC CARBOXYLATION OF SOME GLO RESIDUES ALLOWS THE MODIFIED PROTEIN TO BIND CALCIUM.

-1- MISCELLANDEOUS; CALCIUM ALSO BINDS, WITH STRONGER AFFINITY TO ANOTHER SITE, BEYND THE GLA DOMAIN. THIS GLA-INDEPENDENT BINDING SITE IS NECESSARY FOR THE RECOGNITION OF THE THROMBOMODULIN COMPLEX.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Blood coagulation; Glycoprotein; Serine protease;

-!- FUNCTION: Protein C is a vitamin K-dependent serine protease that regulates blood coagulation by inactivating factors Va and VIIIa in the presence of calcium ions and phospholipids.
-!- CATALYTIC ACTIVITY: Degradation of blood coagulation factors Va
                         *Porcine factor V: cDNA cloning, gene mapping, three-dimensional protein modeling of membrane binding sites and comparative anatomy of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              PROTEIN C HEAVY CHAIN (BY SIMILARITY). The present sequence represents a prostate specific antigen (PSA)

Chem Horoclonal antibodies specific for PSA and hybridomas producing peptide. Monoclonal antibodies: (a) bind to free PSA; (b) are monoclonal antibody 365 binding to amino acids 82-87 of free PSA; (b) are monoclonal antibody 82-87 of free PSA; (b) are monoclonal antibodies 10, 11, 16 or 22.2 and 15.2, 156 or 22.5 binding to amino acids 139-144 (EEEETP) and 55-60

C(SIFHPE) respectively of free and bound PSA, or fragments. The antibodies are useful to detect PSA. For detecting free PSA only, an immunoassay comprising a solid support with attached labelled monoclonal antibody specific for free PSA (especially (b)) and a PSA standard can be used.

Cofficiently labelled) monoclonal antibody binding free and bound PSA (especially prostate and bound PSA, a second solid support with attached (afferently labelled) monoclonal antibody binding free and bound PSA (especially prostate from (c)) can be used either with, or in place of, the first solid support. The antibodies are useful in cancer screening, especially prostate and breast cancer. By obtaining total and free PSA (alferent prostate chome) patients. Measurement of PSA is also useful after radical prostatectomy, to predict disease persistence. The antibodies allow evaluation of PSA free/total radio, enabling separation of PSA free/total radio, enabling separation of possible by total PSA testing, avoiding biopsies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human; prostate specific antigen; PSA; epitope; monoclonal antibody; detection; cancer; serine protease.

Monoclonal antibodies specific for prostate specific antigen useful, e.g. in screening for prostate or breast cancer and especially to distinguish between benign prostatic hyperplasia and

Example; Page 63; 84pp; English

prostate cancer

```
The present sequence is presented a prostite of the managem (FSA) and hybridomas producing them have been developed. The antibodies: (a) bind to free PSA: (b) are monoclonal antibody 565 binding to amino acids 82-87 of free PSA: (b) are monoclonal antibody 81-87 of free PSA: (b) are monoclonal antibodies 10, 11, 16 or 22.2 and conference of tragment, and (c) are monoclonal antibodies 10, 11, 16 or 22.2 and conference of the monoclonal antibodies are useful to detect PSA. For detecting free PSA only, an immunoassay comprising a solid support with attached labelled monoclonal antibody specific for free PSA (especially (b)) and a PSA standard can be used. To detect both free and bound PSA, a second solid support with attached (alferently labelled) monoclonal antibody binding free and bound PSA (especially selected from (c)) can be used either with, or in place of, the first solid support. The antibodies are useful in cancer screening, capecially prostate and breast cancer. By obtaining total and free PSA values, their ratio can be used to separate prostatic cancer (PCa) from consensing the prostatic hyperplasia (BHP) patients. Measurement of PSA is also useful after radical prostatectomy to predict disease persistence. The cutbodies allow evaluation of PSA free/fotal ratio, enabling separation of BPH and PCA patients with PSA values 4-10 ng/ml not previously
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence represents a novel peptide which has 20 contiguous amino acids derived from the 240 residue sequence of the human prostate specific antigen (PSA) (see AAM1023). The preferred peptide has two hydrophobic regions and one hydrophilic region each of about 5 as in length, arranged as follows: hydrophobic-hydrophilic-hydrophobic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Antigen peptide derived from prostate specific antigen - does not cross react with related kallikreins, for diagnosis of prostate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      PSA; kallikrein; prostate cancer; antigenic; polyclonal antisera.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher enkaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             (ABBS7737-ABB72072).
The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.Wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell interactions .
Polyclonal antisera specific for the antigenic peptide may be used in method for diagnosing prostate cancer in vivo or in vitro. The peptide represents a sequence unique to PSA which does not cross react with certain kallikreins.

The antibodies: (a) bind to free PSA; (b) are monoclonal antibody 365 binding to amino acids 82-87 of free PSA (IKRREL) or fragment, and (c) are monoclonal antibodies 10, 11, 16 or 22.2 and 15.2, 156 or 225 binding to amino acids 139-144 (EELFIFP) and 55-60 (SIFHEE) respectively of free and bound PSA, or fragments. The antibodies are useful to detect PSA. For detecting free PSA only, an immunoassay comprising a solid support with attached labelled monoclonal antibody specific for free PSA (especially (b)) and a PSA standard can be used.
                        one cell containing hK2 in a sample which comprises at least 107 to 109 cells; and (b) detecting the presence of the amplified hK2 DNA. The method can be used for detecting, monitoring the progression of and pathologically staging prostate cancer. The present sequence represents prostate-specific antigen protein hK3.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             To detect both free and bound PSA, a second solid support with attached (differently labelled) monoclonal antibody binding free and bound PSA (especially selected from (c)) can be used either with, or in place of, the first solid support. The antibodies are useful in cancer screening, especially prostate and breast cancer. By obtaining total and free PSA values, their ratio can be used to separate prostatic cancer (PCa) from benign prostatic hyperplasia (BHP) patients. Measurement of PSA is also useful after radical prostatectomy, to predict disease persistence. The
oligonucleotides to amplify the DNA by PCR to yield amplified hK2 DNA, where the conditions amplify the DNA obtained by RT of RNA from at lea one cell containing hK2 in a sample which comprises at least 107 to 10
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           specific antigen; PSA; epitope; monoclonal antibody;

   antibodies allow evaluation of PSA free/total ratio, enabling separation of BPH and PCa patients with PSA values 4-10~\rm ng/ml not previously possible by total PSA testing, avoiding biopsies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This polypeptide comprises human prostate-specific antigen (PSA)

C hK3. PSA levels are widely used as a prognostic indicator of prostate carcinoma. The invention provides a novel diagnostic method comprising contacting antibodies that specifically bind to method comprising contacting antibodies that specifically bind to human prostate specific glandular kallikrein protein hK2 (see WA53950 or pro-hK2 (phK2, see AAW45396), but not with PSA, with a sample of physiological fluid from a human. The assay is based on the discovery that phK2 is detected in the supernatant of a prostate carcinoma cell line and that hK2 is present in human physiological fluid from prostate cancer cells. The method is useful for monitoring the treatment and/or progression of prostate cancer, or for the early detection of prostate cancer in males that have believed the cancer cells. The males that chave BPH or a high grade prostatic neoplasia (HPGN) or whose family members have or had BPH, HPGN or a prostate cancer. In males that
                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   also be important in distinguishing between prostate cancer and BPH
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Diagnostic methods using antibodies which bind prostate antigens useful for, e.g. monitoring treatment or progression of prostate

Detecting levels of hAZ may provide a simple diagnostic tool for detecting or determining breast cancer. Detecting hAZ is achieved by producing an hAZ DNA from hAZ RNA by reverse transcription. The hAZ DNA obtained is then amplified by PCA and detected using probas. Determination of breast cancer may also be determined by exposing the hAZ polypeptide to an agent which binds to it and then detecting the binary complex formed. The amount of complex formed correlates directly to the presence of breast cancer in the human individual. The methods can be used in the diagnosis, treatment and/or monitoring of the progression or remission of breast cancer and/or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

Novel prostate specific antigen (PSA) for distinguishing benign prostatic hyperplasia from prostate cancer, comprises a clip at lysine 182 of the amino acid sequence of a mature form of PSA -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence represents a mature form of a novel form of prostate specific antigen (PSA). This form of PSA has at least 1 clip at Lys-182 and may additionally have 1 or more clips at Lys-1, Lys-145 and Lys-146. Preferably, the PSA contains at least 2 clips at Lys-145 and Lys-182. The novel forms of PSA exist at an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Prostate specific antigen; PSA; BPSA; benign prostatic hyperplasia; BPH; marker; diagnosis; human.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Prostate specific antigen specific to benign prostatic hyperplasia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        elevated level in patients suspected of having benign prostatic hyperplasmia (BPH) and therefore may be used as a serum marker or an immunohistological marker to help distinguish BPH from prostate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               cancer. Antibodies recognising the novel forms of PSA and immunoassays that detect and determine the novel forms of PSA are

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      RESULT 13
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    THESE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This invention describes a novel composition (A) having a total concentration of prostate-specific antigen (PSA). (A) is useful as a reference in methods for detecting PSA (a marker for prostatic cancer) in man blood or serum and to generate isoform-specific monoclonal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                antibodies (MAb) against PSA, for use in immunological assays. (A) contains all the isoforms of PSA and can be isolated without significant formation of artefacts by autoproteolysis. Antibodies specific for particular PSA isoforms can improve diagnostic specificity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Composition containing isoforms of prostate-specific antigen, useful a reference standard for analysis and for producing isoform-specific
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps

                                                                                                                                                                                                                                                                              The present sequence represents a mature form of a novel form of prostate specific antigen (PSA). This form of PSA has at least 1 clip at Lys-182 and may additionally have 1 or more clips at Lys-14. Lys-145 and Lys-146. BPSA, a form of PSA that comprises at least 1 clip at Lys-182, exists at an elevated level in the transition zone of benign prostatic hyperplasmia (BPH) tissue, compared to peripheral zone cancer and non-cancer prostate tissues. A method for distinguishing prostate cancer from BPH involves determining the ratio of proPSA and BPSA in a sample.

                                                                                                                                                                                              which is used to produce novel peptides derived from the 240 residue sequence. The preferred peptides have two hydropholor regions and one hydrophilic region each of about 5 as in length, arranged as follows: hydropholic-hydrophilic-hydrophobic. Polyclonal antisera specific for the antigenic peptides may be used in a method for diagnosing prostate cancer in vivo or in vitro. The peptides represent a sequence unique to PSA which does not cross react with certain kallikreins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps.

Inducing a cell-mediated immune response against a target antigen, reducing undesired cells and stimulating presentation of an antigen by a cell, comprises administering a polynucleotide encoding a variant of an antigen

Claim 15; Page 122-123; 146pp; English.

The invention relates to a method of inducing a cell-mediated immune response against a cell comprising a target antigen (I) in a subject, treating a subject having undeasized cells, for example tumour cells cor virally infected cells (C). Treducing the number of (C) in a subject, and stimulating presentation of (I) by a cell. This is done by administering a polynucleotide (II) encoding a variant of (I), so that (II) expressed in a cell and cell-mediated immune response is induced. The method can be used to treat prostate cancer, breast cancer, colorectal cancer and pancreatic cancer, as well as lymphomas and colorectal cancer and pancreatic cancer, as well as lymphomas and infections such as those caused by hepadnaviruses, lentiviruses (including human immunodeficiency virus (HIV)), herpesviruses and the flaviviruses and pestiviruses. The present sequence represents the sequence deleted, used as a target antigen in the method of the

"Gene structure of the P100 serine-protease component of the human Raractive factor."

"Emanuol. 36:505-514(1999).

-I- FUNCTION: COMPONENT OF THE BACTERICIDAL RA-REACTIVE FACTOR RARF

WHICH SPECIFICALLY BINDS TO RA AND R2 POLYSACCHARIDES EXPRESSED BY

CERTAIN ENTERORACTERIA. IT TRIGGERS THE ACTIVATION OF COMPERMENT

CASCADE BY ACTIVATING THE C4 AND C2 COMPONENTS. IT ACTIVATES THE

C4 COMPONENT BY CIRCLY THE ALEPHA-CHAIN OF C4.

C1 COMPONENT BY CIRCLY STATES OF A COMPLEMENT-ACTIVATING COMPONENT.

C1 CHARF) AND A POLYSACCHARIDE-BINDING (MANNOSE-BINDING) COMPONENT.

C1 COMPAIN: CRARF HAS A MODULE ORGANIZATION SIMILAR TO CIR AND C1S.

ILINED BY A DISULFIDE BOND.

C1 DOWAIN: CRARF HAS A MODULE ORGANIZATION SIMILAR TO CIR AND C1S.

C1 SIMILARITY: CONTAINS 2 USB DOMAINS.

C1 SIMILARITY: CONTAINS 2 USB DOMAINS.

C1 SIMILARITY: CONTAINS 1 EGF-LIKE DOMAIN.

BLOPHYS. Res. COMMUN. 190:681-687(1993).

-1- FUNCTION: COMPONENT OF THE BACTERICIDAL RA-REACTIVE FACTOR RARF WHICH SPECIFFCALLY BINDS TO RA AND R2 POLYSACCHARIDES EXPRESSED BY CERTAIN ENTERCOBACTERIA. IT TRIGGERS THE ACTIVATION OF COMPLEMENT CASCADE BY ACTIVATING THE C4 COMPONENTS. IT ACTIVATES THE C4 COMPONENT BY CLEATIVATING THE ALPRA-CHIN OF C4.

-1- SUBJUNT: RARF CONSISTS OF A COMPLEMENT-ACTIVATING COMPONENT. CASUBLY SACHED BOND.

-1- SUBJUNT: RARF CONSISTS OF A COMPLEMENT-ACTIVATING COMPONENT. CRARF IS AN HETERODIMER OF A HEAVY (P70) AND A LIGH CHAIN (29)

-1- SUBJUNT: LIVER.

-1- DOMAIN: CRARF HAS A MODULE ORGANIZATION SIMILAR TO CIR AND CIS.

-1- SIMILARITY: BELONGS TO PEPTIDASE FAMILY S1.

-1- SIMILARITY: CONTAINS 2 USB DOMAINS.

-1- SIMILARITY: CONTAINS 2 USB DOMAINS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This SWISS-PROT entry is copyright. FUNCTION: THIS ENZYME IS CLOSELY ASSOCIATED WITH AN ENDOTOXINSENSITIVE HEMOLYMPH COAGULATION SYSTEM WHICH MAY PLAY IMPORTANT ROLES IN BOTH HEMOSTASIS AND HOST DEFENSE MECHANISMS. ITS ACTIVE FORM CATALIZES THE ACTIVATION OF FACTOR B. CATALIZES THE ACTIVATION OF FACTOR B. CATALIZES FORM THE ACTIVATION OF FACTOR B. CATALIZES Selective cleavage of 103-Arg-|-Ser-104 and 124-Ile-|-Ile-125 bonds in Limulus clotting factor B to form activated factor B. Cleavage of Pro-Arg-|-Xaa bonds in synthetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     HEAVY CHAIN LIGHT CHAIN
